ONTARIO ROCK GARDEN & HARDY PLANT SOCIETY
SEEDEX 2015-2016
GUIDE TO SEED GERMINATION

This key designates a proven germination technique for each species of seed stored dry for 6 months @ 20°C, except where noted. If you have germination information, suggestions, corrections or questions, contact Carol Clark, 88 Cottonwood Dr., Toronto, Ont., Canada, M3C 2B4. E-mail carol.clark@utoronto.ca

21	A *
ORG&HPS 2015-16	
Adiantum pedatum*	
Pe Maidenhair Fern, lovely native woodlander	

WHAT OUR TEMPERATURE DESIGNATIONS MEAN

- 4°C** Either place seeds outdoors to be exposed to a wide range of winter temperatures including freezing or put them in a refrigerator (not a deep freezer).
- 10°C** Either place seeds outdoors in spring or fall or choose a very cool indoor location.
- 20°C** Either place seeds in a sheltered outdoor location in mid to late spring or grow at room temperature.

SYMBOLS, LETTERS and NUMBERS

- * This species needs special care which is described on the reverse side.
- ? We have no information on this species. We sometimes provide an informed guess about which approach you should try. Let us know what is successful.
- ! Sow immediately. Either the viability of these seeds is short or the species propagates best with fresh seed. Stored seed might be coaxed into germination with temperature cycling and patience.
- ⊗ This species is not distributed by ORG&HPS Seedex because it is invasive in Ontario.
- ☒ This seed is restricted and cannot be imported to the United States.

- A** Sow @ 20°C. Seed germinates within 3 months.
- B** Sow @ 20°C. If seed does not germinate within 3 months, try 4°C for 1-2 months, then 20°C again.
- C** Sow @ 20°C for 3 months, then place @ 4°C for 3 months.
- D** Use repeated cycles of 20°C, then 4°C for 3 months each. Germination is very prolonged.
- E** Sow @ 20°C for 6 weeks, then place @ 4°C for 6 weeks, then slowly raise temperature to 10°C for 6 weeks. If there is no germination, repeat the cycle.
- F** Sow @ 4°C.
- G** Sow @ 4°C for 3 months, then place @ 20°C for 3 months.
- H** Use repeated cycles of 4°C, then 20°C for 3 months each. Germination is very prolonged.
- J** Sow @ 4°C for 3 weeks, then place @ 20°C.
- K** Sow @ 10°C.
- L** Expose to fluctuating outdoor winter temperatures including freezing for 3 months. Gradually increase light and temperature in spring.
- N** Sow directly in garden.

- 1** Resents transplanting.
- 2** Requires darkness.
- 3** Requires light or the seed is very fine. Surface sow and expose to light.
- 4** Germination is improved by using GA3*.
- 5** Germination is successful only when GA3* is used.
- 6** Requires scarification. Nick or rub between sheets of sandpaper.
- 7** Requires soaking. Place in warm water until seeds swell, usually 24-48 hours. Discard the water and any seeds that remain floating.
- 8** Pulpy coat inhibits germination. Remove by soaking and rinsing in clean water daily for 7 days. Discard the water.
- 9** Tails may inhibit germination. Remove them.

*A source for GA3 is Gardens North, Box 370, Annapolis Royal, NS Canada B0S 1A0. fax 902-532-7949.
