BOTANIKOS SODO AUGALŲ SĄVADAS

4

Leidinyje apibendrinama informacija apie Šiaulių universiteto Botanikos sode sukauptas augalų taksonų ir veislių kolekcijas.

Augalų sąvadas sudarytas naudojantis A. L. Tachtadžjano sistema. Lietviški ir lotyniški augalų vardai apibūdinti remiantis literatūros sąraše pateiktais šaltiniais. Lietviški augalų vardai pateikti remiantis Valstybinės lietuvių kalbos komisijos patvirtintu lietuviškų augalų vardų sąrašu. Sąvade šeimos, augalų taksonai ir veislės išdėstyti alfabeto tvarka.

Viršelyje melsvasis gencijonas (*Gentiana cruciata* L.). Rūšis įtraukta į Lietuvos Raudonosios knygos sąrašus.

Nuotraukos autorius fotografas Romualdas Struoga.

Šiaulių universiteto Botanikos sodas, pritardamas Tarptautiniam Botanikos sodų konsorciumui, pagrindinę savo misiją atlieka kaupdamas dokumentuotas gyvų augalų kolekcijas, vykdydamas mokslinius tyrimus, saugodamas ir demonstruodamas augalus bei užsiimdamas edukacine ir švietėjiška veikla.

1961 m. buvo įkurta Šiaulių pedagoginio instituto biologinė stotis, kuri vėliau buvo pertvarkyta į agrobiologinę stotį. Biologinės stoties vedėju buvo paskirtas Stasys Gliaudys. 1997 m. doc. dr. Kęstučio Kazimiero Vilkonio pastangomis agrobiologinė stotis tapo Šiaulių universiteto (ŠU) Botanikos sodu. Nuo 2000 m. prof. Vidos Motiekaitytės iniciatyva imtos kurti naujos augalų kolekcijos, pradėta bendradarbiauti su pasaulio sodais, vykdant sėklų mainus ir plėtojant veiklą tarptautinėse organizacijose. ŠU Botanikos sodas yra Tarptautinio Botanikos sodų konsorciumo (BGCI), Planta Europa, Baltijos jūros regiono botanikos sodų, Baltijos šalių botanikos sodų bei Lietuvos universitetų botanikos sodų asociacijos (LUBSA) narys. 2005 m. Botanikos sodas tapo Tarptautinio fenologinių sodų Europoje tinklo (IPG) nariu. Nuo 2007 m. sodo direktorė – prof. Asta Klimienė.

Botanikos sodui išsijungus į Tarptautinę Biologinės įvairovės išsaugojimo programą ir toliau kryptingai rūpinamasi retaisiais ir nykstančiais augalais, Lietuvos Raudonosios knygos augalų rūšimis ir jų išsaugojimu. Lietuvos nykstančiųjų ir retujų augalų kolekcijoje dabar yra 95 augalų rūšys, iš jų 92 rūšys įtrauktos į Lietuvos Raudonąją knygą.

Nuo 2012-2013 m., dėka vykdomo LATLIT programos projekto „Savito identiteto pažinimas per Žiemgalos krašto florą“ (Green Environment) LLIII-123 buvo įkurtas naujas Lietuvos floros skyrius pagal kraštovaizdžio architektės Jurgitos Tamutytės siūlytą planą. Šiame skyriuje augalai auginami jiems būdingose ekosistemose, todėl įrengta pelkė, užliejama vidutinio drėgnumo, sausa pievos, kalva ir pan. Šiuo metu kolekcijoje yra 50 vienskilčių, 110 dviskilčių klasės atstovų. Iš jų auginama 8 rūšys sumedėjusių augalų, atskirose kolekcijose 43 piktžolių ir 30 vaistinių augalų taksonų, 30 rūšių įrašytų į Lietuvos Raudonąją knygą.

Pagal Biologinės įvairovės konvencijos reikalavimus vykdomi sėklų mainai. 2013 m. Botanikos sodas gavo apie 882 augalų sėklų pavyzdžių, bendradarbiaujama su daugiau nei 300 pasaulio botanikos sodų. Vykdomų mokslinių tyrimų kryptys yra susijusios su dekoratyviųjų augalų introdukcija ir aklimatizacija, augalų biologinės įvairovės tyrimais *ex situ* ir *in situ*, fenologiniais stebėjimais. Kaupiamas augalų sėklų fondas.

Botanikos sodas nuo 2011 m. užima 6,5 ha žemės plotą, tačiau gyvų augalų dokumentuotos kolekcijos yra sukauptos tik 2,5 ha plote, sekančiuose kolekciniuose skyriuose:

Augalų sistematikos ir geografinios skyrius – auginama 894 augalų taksonų ir 14 veislių atstovai iš 93 šeimų. Auginami vienmečiai, dvimečiai, daugiamėciai žoliniai augalai bei puskrūmiai. Prioritetas teikiamas daugiamėciams žoliniams augalamams. Gausiausios šeimos – astriniai (*Asteraceae*), notreliniai (*Lamiaceae*), pupiniai (*Fabaceae*) ir salieriniai (*Apiaceae*).

Dendrologijos skyrius – kolekcijoje auginama 258 spygliuočiai, iš jų 199 veislės ir 316 lapuočių medžių ir krūmų, iš jų 130 veislių.

Erikinių šeimos augalų skyrius – auginama virš 319 taksonų, iš jų 148 veislių augalų. Kolekcijoje didesnis dėmesys skiriamas rododendro (*Rhododendron*) genties augalamams, kurie šiuo metu yra vieni iš populiariausių dekoratyvinių augalų.

Fenologinis skyrius – tame vykdomi 18-os sumedėjusių augalų fenologiniai stebėjimai pagal Tarptautinių fenologinių sodų Europoje programą. Visuose programoje dalyvaujančiuose soduose auginami genetiškai identiški augalai.

Gėlininkystės skyrius – auginama 1220 vienmečių, dvimečių ir daugiamėcių, iš kurių 484 rūšių ir 736 veislių atstovai. Daug dėmesio skiriama vilkdalginių (*Iris*), lelijų (*Lilium*), melsvių (*Hosta*) ir viendienių (*Hemerocallis*) kolekcijoms.

Kalninių augalų skyrius – ekspozicijoje pristatoma Europos, Azijos, Amerikos kalnų flora. Augalai parenkami atsižvelgiant į jų dekoratyvumą, geografinius aspektus, rūšies retumą. Skyriuje auginama 1145 sumedėjė ir žoliniai augalai, iš kurių 964 rūšių ir 181 veislių atstovai.

Prieskoninių ir vaistinių augalų skyrius – auginama apie 50 taksonų vienmečių ir daugiamėčių žolinių augalų ir puskrūmių. Dauguma jų vertingi ne tik kaip prieskoniniai, bet ir kaip dekoratyvieji, gydomieji, aromatingieji bei vitaminingieji augalai.

Atlikus auginamų augalų inventorizaciją, nustatyta, kad iš viso Botanikos sode auginama 4206 taksonų ir veislių (2798 taksonų, 1408 veislių), priklausančių 4 sistematiniams skyriams ir 155 šeimoms. Gausiausios yra astrinių (*Asteraceae*), erikinių (*Ericaceae*), bervidinių (*Scrophulariaceae*), notrelinių (*Lamiaceae*), vėdryninių (*Ranunculaceae*) šeimos. Be to, Botanikos sode yra sukaupta ir kambarinių augalų kolekcija, joje – 85 taksonai ir veislės.

Augalų sąvadas sudarytas naudojantis A. L. Tachtadžjano sistema. Sąvade šeimos bei augalų taksonai ir veislės išdėstyti lotyniško alfabeto tvarka.

Prie augalų taksonų ir veislių laužtiniuose skliaustuose nurodytas nevartotinas augalo vardas. Po kiekvienu taksono ar veislės vardu pateikta augalo gavimo vieta, metai, kai kuriems augalamams skliausteliuose nurodytos natūralios buveinės, iš kurių augalai buvo paimti. Taip pat nurodytas Botanikos sodo kolekcinis skyrius, kuriame auginamas nurodytas augalas ar kita papildoma informacija.

Botanikos sode auginami augalai apibūdinti remiantis literatūros sąraše pateiktais šaltiniais. Lietviški augalų vardai pateikti remiantis Valstybinės lietuvių kalbos komisijos patvirtintu lietuviškų augalų vardų sąrašu.
